SUMMARY

I am a Software Engineer passionate about technology and leveraging software development to solve day-to-day societal challenges. I decided on a career switch from Procurement to Software Engineering where my creativity and passion meet. My hunger for knowledge in this field is undying, including other areas like CyberSecurity.

SKILLS

- Javascript
- React js
- Ruby
- Rails
- MySQL
- Aws
- Project Management

PROJECTS

TXC FortBase - <https://github.com/KeithWesley254/txc-fort-base-react-rails>

Project Description - TXC FortBase is a fandom page for people who want to connect with the nation's heroes. You can get information about the latest technologies in the TXC military and public research. It is built on React JS and uses a Rails backend API.

TXC Clan Crypto - <https://github.com/KeithWesley254/crypto-Tracker-Wes>

Project Description - TXC Clan Crypto is an application inspired by the rise of cryptocurrencies. The application aims to give relevant up-to-date information on everything related to cryptocurrencies. More features will be implemented in the future such as information on different owners and other investment areas. It is built on React JS.

Video Gallery and MMO News - <https://github.com/KeithWesley254/Phase-1-Project-Highlights-MMO-news>

Project Description - The app provides the latest MMO news and updates. It has a lovely gallery of videos that range from popular videos on the internet to simple collections of interesting historical videos, educational ones, and anything I find interesting.

Events Bomboclat - <https://github.com/KeithWesley254/bomboclat-events-frontend>

Project Description - A web application built to let entrepreneurs create events and users, register for events. It is built on React JS and uses a Rails backend API among other external APIs.
